BULBS FOR EARLY FORCING.

The following are specially selected and strongly recommended to those who desire a supply of flowers at Christmas and early in the New Year.

EARLY WHITE ROMAN HYACINTHS.

These are most valuablo whcre supplies of early cut flowers are required, and if planted early in September and gently forced, will bloom in November, or their flowering may be kept back till Christmas or later by keeping them in a cool placc. The flowers are produced in great profusion, each bulb throwing up a quantity of delicately-scented pure white blossoms.

HYACINTHS.

HINTS ON THE CULTURE OF THE HYACINTH.

The bulbs should be potted in soil composed of equal parts of cow manure, good loam, and river sand. This compost should be prepared in April or May, and afterwards turned over two or three times.

Immediately after potting place out of doors on a bed of ashes, and cover the pots with six inches of the same material, or cocoa fibre is preferable; there let the pots remain till full of roots, which will usually be about six or eight weeks. If very early flowers are required, pot in September, and when sufficiently rooted force gently, and give abundance of water; but if large finely developed trusses and rich colours are preferred to very early flowers, the Hyacinth must not be forced, but when removed indoors should be placed on the shelf of a greenhouse, or in a cold frame, close to the glass, always in the most genial and sunniest situation at command, giving water regularly and freely, as it is well known to cultivators that failures, for the most part, arise from allowing the soil to become dry, when the rootlets are in consequence injured. Abundance of air is necessary, but a dry atmosphere and a draughty situation should be sedulously avoided.

If the Hyacinth is cultivated in glasses, the base of the bulb should just touch the water, and a little charcoal should be placed in the glass to keep the water sweet. The glasses, if possible, should be kept in a room without a fire, or better still in a greenhouse.

FREESIAS

FREESIA REFRACTA ALBA.

The chaste and fragrant flowers of these beautiful Cape bulbs render them of the greatest value for decorative purposes, especially where cut flowers are required during the winter months; they grow about 9 inches high, producing 6 to 8 flowers, the fragrance of which is most delightful. They can be easily forced, and should be planted 6 to 12 bulbs in a pot.

IRIS KÆMPFERI.

IRIS KÆMPFERI

Many magnificent varieties of this handsome and attractive plant have been imported from Japan; indeed scarcely any plants in the flower garden can compare for gorgeous beauty with this section of Iris. Varying in colour from pure white to rich maroon-crimson, there are few flowers surpassing them in size and the brightness of their colouring. They succeed admirably planted on the margin of a lake, or in any situation where plenty of moisture can be given. 2*s.* 6*d.* and 3*s.* 6*d.* each; 24*s.* and 36*s.* per dozen. RETARDED BULBS AND ROOTS.

Messrs. William Bull & Sons beg to draw attention to the following list of Retarded Bulbs and Roots, which, being all of best quality and selected roots only, cannot fail to give every satisfaction.

LILY OF THE VALLEY.

Finest Retarded Gorman Crowns. 8*s*. per 100, 75*s*. per 1,000.

These are recommended for flowering from June to December and January, being most reliable, and certain to give satisfaction. The crowns should be potted or boxed as soon as received, placed in a cool frame or other convenient place for a few days, and then removed to a temperature of 50° to 60° Fahr., when they will flower in from 20 to 24 days, giving at the same time an ample supply of foliage.

LILIUM AURATUM.

Fine sound Retarded Roots. 12*s*. and 18*s*. per dozen.

LILIUM LONGIFLORUM GIGANTEUM.

Sound Retarded Bulbs of this useful Lily can be supplied at 12*s*., 18*s*. and 30*s*. per dozen.

SPIRÆA PALMATA ALBA.—A counterpart of *S. palmata*, except in the colour of the flowers, which are pure white; a very beautiful and elegant variety. 9*d.* each; 7*s.* 6*d.* per dozen.

FOR RETARDED ROOTS OF SPIRÆAS, see page 21.

DOUBLE TUBEROSES.

(POLIANTHES TUBEROSA.)

The perfectly double flowers of *Polianthes* are well known for their delicious fragrance and pearly whiteness, being admirably adapted for Button-holes, Bouquets, &c.; indeed, are of the greatest value wherever cut flowers are required. By successional plantings these lovely flowers may be had all through the Summer and Autumn. They should be potted in rich loamy soil and started in a good bottom heat, being afterwards grown on in a stove, with plenty of moisture. If not required in flower until September, the bulbs may be potted in March or April, and placed in a cold frame, standing them in the open during the Summer. As soon as the flower spikes are about a foot high, the plants should be transferred to a greenhouse or even a room, when their chaste and fragrant flowers will be developed in a most satisfactory manner.

DOUBLE AMERICAN.

"THE PEARL."

Selected bulbs, 2*s.* 6*d.* per dozen; 15*s.* per 100.
Finest picked bulbs, 20*s.* per 100.

The above can be supplied about the end of December.

AMARYLLIS.

AMARYLLIS BELLADONNA.

AMARYLLIS.

This deservedly popular family cannot be too highly recommended. The ease with which they are cultivated and the gorgeously beautiful flowers they produce at almost any season, make them most desirable in any collection. By gradually drying the bulbs they can be put to rest at any time during the year, and then, when required, if started in a gentle heat, they quickly develop their large Lily-like blossoms, which are of various colours, generally embracing crimson, white and red, scarlet, rose-flaked, striped white and crimson, with various shades of colours.

Choice selections of good sorts, 2, 3, 4, 5, and 6 guineas per dozen.

AMARYLLIS FORMOSISSIMA.

AMARYLLIS BELLADONNA.

(The Belladonna Lily.)

These beautiful hardy bulbs have large handsome blush flowers, richly flushed with rosy purple, rendering them extremely useful for greenhouse and conservatory decoration. 6*s*. and 9*s*. per dozen; 40*s*. to 60*s*. per 100.

AMARYLLIS FORMOSISSIMA.

(Jacobœa Lily.)

A very handsome bulbous plant, freely producing magnificent flowers of a very rich dark velvety crimson. *Vide* illustration. It will succeed well in a warm greenhouse. 6*d*. each; 5*s*. 6*d*. per dozen.

GLADIOLUS.

(HYBRIDS OF GANDAVENSIS.)

There are few flowers more showy and beautiful than the Gladiolus, and the varieties of the *Gandavensis* section are perfectly hardy and easily grown, whilst their erect and stately growth, and long spikes of flowers, developing themselves successively, never fail to win admirers.

To facilitate the cultivation of this highly decorative plant, a few remarks may be necessary to some :—

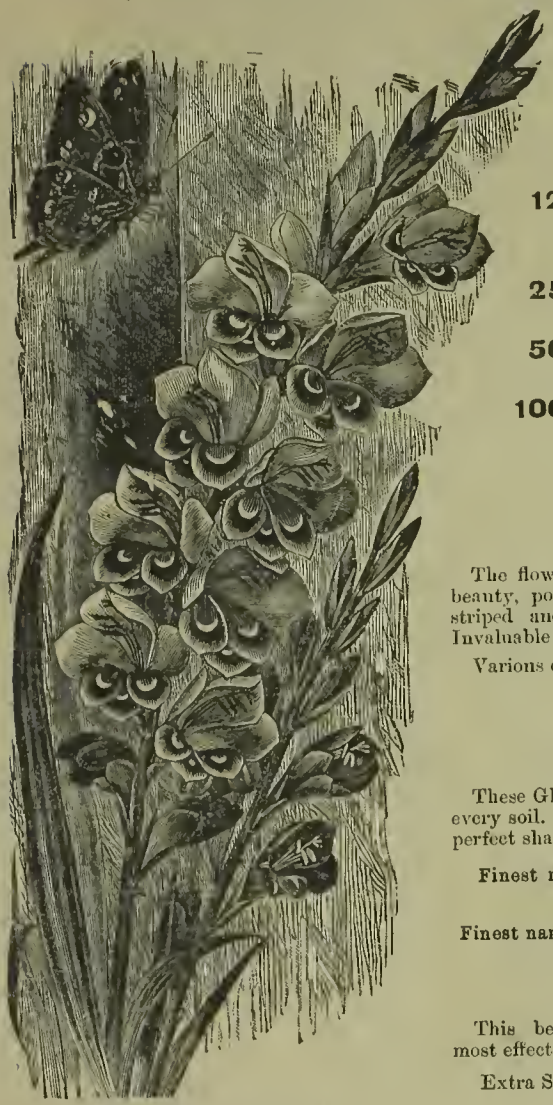
The best and safest time for planting is from the beginning of April to the end of May, when a continuous bloom may be assured from July to September.

Soil is not much a point for consideration, so long as it is not stiff and consolidated ; but it is important that it should be deeply dug previous to planting.

Large bulbs should be planted from 3 to 4 inches, and smaller bulbs 2 inches deep.

During excessively dry weather, copious waterings are recommended.

When any bulbs show signs of growth before the time mentioned above, they should be potted and kept in a cool frame until the proper season for planting out.



LEMOINE'S GLADIOLUS.

This beautiful tribe of plants should be largely planted everywhere.

Orders are booked throughout the year at the following prices, and the bulbs supplied in January, February, or March.

HANDSOME FLOWERED TUBEROUS-ROOTED SECTION.

The immense size to which the flowers of this popular race of plants have now attained considerably enhances their value for decorative and bedding purposes. Of nearly every shade of colour, from deepest crimson-scarlet to white, the blooms are produced in the utmost profusion, thus rendering them extremely showy and attractive.

SINGLE-FLOWERED. NAMED.

Selections of good single-flowering named varieties can be made at 12s., 18s. and 24s. per dozen.

SINGLE-FLOWERED. UNNAMED.

Seedlings of various colours, 4s., 6s. and 9s. per dozen; 25s., 35s. and 50s. per 100.

DOUBLE-FLOWERED. NAMED.

Named Varieties with double flowers, at 30s., 42s. and 60s. per dozen.

CALADIUMS CAN BE SUPPLIED IN DORMANT BULBS FROM OCTOBER TO APRIL.

EUCODONIAS.

A free-flowering and dwarf-growing section of Gesneraceous plants, with attractive flowers intermediate between Tydæas and Gloxinias. In variety, 1*s.* and 1*s.* 6*d.* each.

GESNERAS (NÆGELIAS).

The value of Gesneras as decorative plants can scarcely be over-estimated. Most of them have rich velvet-like foliage, which, in the respective kinds, varies from green to crimson. If only grown for the foliage they are very attractive, but they produce splendid pyramidal spikes of blossom, which are extremely handsome. Originally the principal colour was orange-scarlet; now, as the result of fertilisation, there are various colours and shades, added to which the spotting on the flowers of some of the varieties is extremely pretty.

Selections of good varieties at 24s. and 30s. per dozen, according to sorts.

GLOXINIAS.

The handsome and showy flowers of these beautiful bulbous plants render them of the greatest value for the decoration of Stoves and Conservatories. Of easy culture, they can, with judicious treatment, be had in bloom at almost any season of the year; their attractive flowers, being of large and good shape, are admirably adapted for cutting. The colours are most varied, every hue being pure and distinct, while some of the kinds are spotted and maculated in a most pleasing manner.

Choice selections made at 18s., 24s. and 30s. per dozen, according to sorts.

Good blooming tubers, unnamed, of various colours, raised from handsome varieties, 4s., 6s. and 9s. per dozen; 30s., 40s. and 50s. per 100.

TYDÆAS.

These can be cultivated so as to produce an abundance of bloom throughout the winter, their flowering season principally depending on the time of year their tubers are started into growth. With a little management a succession of blooming plants can be had nearly throughout the year. 18*s.*, 24*s.* and 30*s.* per dozen, according to sorts.

ACHIMENES.

These charming free-flowering plants are very suitable for growing in hanging baskets and pots for conservatory decoration, the plentiful manner in which their blossoms are produced and their charming colours making them most desirable. Selections made at 9*s.*, 12*s.* and 18*s.* per dozen. When dormant, rhizomes can be supplied as follows:—

12 named varieties, 3 bulbs each sort, 36 bulbs, 6*s.*
6 ,, ,, 3 ,, ,, ,, 18 ,, 3*s.* 6*d.*
Choice sorts, 6*s.*, 9*s.* and 12*s.* per dozen.

Fine mixed, 2*s*. 9*d*. per dozen ; 21*s*. per 100. **Fine named varieties**, 6*s*., 12*s*. and 15*s*. per dozen.

GLADIOLUS, EARLY FLOWERING

GLADIOLUS COLVILLEI

A most useful early flowering Gladiolus, the flowers being of a bright rosy purple, striped with white, forces well, and is easily grown in pots. 3*s*. per 100 ; 25*s*. per 1,000.

LOWERING VARIETIES—*continued.*

For grace and beauty these compare favourably with any other section of the Gladiolus. They embrace the most delicate and beautiful combinations of colour, are of dwarf branching habit, free blooming, flowering from June to August, or by gently forcing will bloom in April or May. They are specially adapted for growing in pots for conservatory decoration in the spring and early summer. Invaluable for cutting, the flowers lasting a long time when placed in water.

BULL'S FOOD FOR PLANTS.

ONCE TRIED ALWAYS USED. Because—

HIGHLY CONCENTRATED. ODOURLESS.

SAFE AND RELIABLE. CAUSES NO FUNGUS.

QUICK IN ACTION. LASTING IN EFFECT.

Therefore the Cheapest and Best.

ANALYSTS' REPORT.

The analysis shows this to be a complete Plant Food, and of the highest quality. The material not only contains an abundance of all the constituents necessary for plant growth, but the analysis shows also that the four chief constituents are each in that combination which renders them in the most beneficial and available form for the healthy development of plants.

For these reasons, users of this Plant Food in the proper quantities cannot fail to produce the very best results within the capability of their plants.

DIRECTIONS FOR USE.

For MAKING A VINE BORDER.—Use 56 lbs. to a ton or cubic yard of loam.

For MAKING BORDERS for PEACHES, NECTARINES, FIGS, &c.—28 lbs. to the ton or cubic yard.

For TOP DRESSING VINE BORDERS.—Mix about 2 lbs. to a barrow-load of good loam, spreading to a depth of 2 to 3 inches. If roots are not too near the surface, about 1 lb. to the square yard may be forked in, instead of top dressing. As soon as the berries are making good headway, give a slight sprinkling over the surface, and repeat about every fortnight or three weeks as occasion requires.

For VINES IN POTS.—Sprinkle a dessertspoonful on the surface as soon as the berries begin to swell freely, well mulching over a little later, following with an occasional sprinkling of the Food as progress is made.

For POT PLANTS AND BULBS.—Sprinkle on the surface of the soil about every three weeks, at the rate of a small teaspoonful to a 5-inch pot, so that when the plants are watered, the Plant Food will be gradually absorbed into the soil.

For CHRYSANTHEMUMS.—At the time of potting, some of the Plant Food should be thoroughly mixed with the compost, and afterwards, when the buds begin to swell, frequent top-dressings should be given, the quantity used being estimated according to the size of the pots and vigour of the plants.

For ROSES, SHRUBS, &c., in Pots.—Use about a tablespoonful to a 12-inch pot several times during the season.

For STRAWBERRIES in the open.—Well fork into the ground before planting 14 lbs. to the rod, giving several surface applications after the fruit has set.

For TOMATOES, CUCUMBERS, &c.—Mix 2 lbs. to the barrow-load of compost, applying a surface dressing several times to assist growth of the fruit.

For PLANTS, FRUITS, ROSES, and all Plants in Borders and the Open Ground.—Apply about 4 oz. to the square yard as often as occasion may require, raking and watering it in.

For LAWNS.—Scatter broadcast at the rate of 2 oz. to the square yard, and well water.

For GENERAL POTTING Purposes.—Mix 2 lbs. to the barrow-load of compost.

20/- per cwt.; £18 per ton; 56 lbs. 12/6; 28 lbs. 7/6; 14 lbs. 4/6.
Also in Tins, containing about 1½ lb.. at 1/- Larger Size (about 5 lbs.) 2/6.
